

TEST ANALYST

We have an exciting position available in Cape Town. The Test Analyst will be required to be analytical while testing software and products against a business specification. The vacancy is required to report and give feedback on testing by the set deadlines, ensuring that no software and/or product goes to market without 100% success during the testing phase. Working within a greater Operations team, the Test Analyst must be committed to producing quality software products for the payments market in Africa.

Key Personal Competencies:

Educational

- Grade 12
- Tertiary Qualification – Advantageous

Work Experience

- At least 2 years' experience as QA
- Experience in quality management software and processes

Attitude

- A keen and enquiring mind which constantly seeks new knowledge and better methodologies to produce better software
- Self-motivated, driven and ambitious
- A “go-getter” with a “can-do” attitude
- A willingness and desire to learn in non-classroom environments
- The ability to work for long periods without direct supervision and/or guidance executing long term projects with confidence and attention to detail
- The ability to be fully cognizant of the business requirements and needs for the software being developed and able to make appropriate judgement calls to meet both business needs and software quality requirements
- Ability to work against deadlines and deliverables

Skills

- Meticulous
- Excellent verbal & written communication skills
- Able to challenge constructively to maximize overall product quality
- Passionate about the customer experience and quality
- Good troubleshooting abilities

- Basic understanding of User Experience (UX) design processes and standards
- Basic understanding of usability differences between iOS, Android and Web
- Basic understanding of usability differences between mobile and web screens
- Understanding of general data management and programming concepts

Responsibilities Include

Testing

- Develop and implement a Quality Assurance test plan/s
- Establish suitable testing methodologies and processes
- Test products and solutions with respect to functionality, performance, reliability, stability and compatibility
- Conduct research where necessary to gain technical understanding of projects

Reporting and Recommendations

- Provide reports on test results with detailed documentation on failed tests
- Provide recommendations for improvements of products and systems where tests fail

Communication

- Escalate failed tests to relevant internal stakeholders
